Capacity Building Project

Capacity Building Project, realized within the South Baltic Programme, was launched to help potential beneficiaries of the Programme in the preparation and implementation of crossborder projects.

Aims and objectives

The specific objectives of the Capacity Building Project are to:

- Identify needs for cross-border cooperation
- Analyze obstacles that hamper smooth development of cross-border projects
- Disseminate information about the South Baltic Programme to a wider range of potential beneficiaries
- Train potential beneficiaries in successful project development
- Facilitate development of joint project proposals of crossborder character

What we can offer

The main goal of the Capacity Building Project is to help potential project developers to prepare, submit and later implement good projects within the South Baltic Programme. Interested institutions can benefit from:

- Training on project development – trainings in national languages will introduce the participants to a variety of tools and methods used to identify, develop and manage projects; the participants will learn how to generate project ideas, identify partners, plan and prepare projects, estimate costs etc.
- Cross-border workshops – the workshops will be addressed to beneficiaries who have already identified concrete ideas for development of projects within the SB Programme; participation in the workshops will prepare beneficiaries for concrete cooperation in joint projects
- Individual project consultations – potential beneficiaries can receive free-of-charge consultations on project development

Who can benefit from our service
